

KIRAN JANA

JAVA FULL STACK DEVELOPER React · Microservices · Agentic AI

✉ kiran.jana0604@gmail.com 📞 +91 93909 15536 📍 Chennai, Tamil Nadu, India

PROFILE

Java Full Stack Developer with 7+ years architecting scalable enterprise applications for global clients including Standard Chartered Bank, CME Group, Adidas, Axis Bank, SAP, and Rogers Communications. Specialized in Spring Boot microservices, modern React UI, and emerging Agentic AI solutions.

TECHNICAL SKILLS

Jenkins	★★★★★
Terraform	★★★★☆
Nginx	★★★★★

PROFESSIONAL EXPERIENCE

Capgemini • Java Full Stack Developer

May 2024 – Present

Client: **Standard Chartered Bank**

Delivered four mission-critical platforms spanning banking data orchestration, ESG geospatial analytics, and Agentic AI — partnering with cross-functional teams across data, risk, and engineering at SCB.

► External Data Platform (EDP) • Configurable data orchestration

- Architected a configuration-driven platform on Java 8 + Spring Boot microservices that ingests vendor files (daily, weekly, monthly, quarterly, half-yearly, and annual) from AWS S3 and routes them to downstream clients per their license and contractual entitlements.
- Built a cron-scheduled datafeed engine that automatically reads, reformats, and dispatches data based on user-defined routes and processors; persisted entities, agreements, licenses, datasets, and datafeed metadata in PostgreSQL via Hibernate/JPA.
- Designed a React + Material UI admin tool — backed by Spring Boot REST APIs and Spring Security auth — that lets stewards configure entities, agreements, licenses, datasets, datafeeds, routes, and processors, eliminating hardcoded ingestion pipelines.
- Hardened delivery with JUnit/Mockito unit tests, Postman + Swagger API contracts, Dockerized services, Bitbucket-driven Jenkins CI pipelines, and Grafana dashboards for ingestion-rate and SLA monitoring.

► NatureRisk Geospatial Tool (NBD) • Python • React • Leaflet

- Engineered an automated geospatial visualization platform that replaced manual MicroStrategy (MSTR) workflows for plotting SCB's sustainable and non-sustainable client and internal assets on interactive maps.
- Built a React + Redux + Leaflet front-end (Material UI / Bootstrap components) rendering multi-polygon overlays and satellite imagery driven by latitude/longitude datasets, enabling precise asset identification at scale.
- Authored Python conversion logic to normalize heterogeneous geospatial datasets and automated the end-to-end ingestion-to-visualization pipeline — the most complex part of the engagement.
- Exposed Spring Boot REST APIs over PostgreSQL/PostGIS for spatial queries, with Redis caching of high-traffic tile lookups; documented contracts in Swagger and verified with Postman test collections.

► CRA SDM Analytics Dashboard • Agentic AI • Database-agnostic

- Built a database-agnostic Agentic AI tool that connects to any docked database (PostgreSQL, MySQL, MongoDB) and delivers intelligent, natural-language responses to analyst prompts via LLM integration and prompt-engineering pipelines.
- Implemented file-upload parsing across structured and unstructured formats (CSV, Excel, PDF) that accurately reads inputs and answers prompts grounded in the uploaded content.
- Developed a dynamic visualization layer rendering graphs, tables, charts, and multi-visualizations live from the connected database — turning the dashboard into a self-service analytics surface.
- Self-hosted the platform on a Hostinger VPS using LXD / LXC system containers

AWS (EC2, S3)	★★★★☆
Azure	★★★★☆
Hostinger VPS	★★★★☆
Maven / Gradle	★★★★☆
Git / GitHub	★★★★☆
Bitbucket	★★★★☆

MESSAGING & CONNECTIVITY

Apache Kafka	★★★★☆
Hystrix	★★★★☆
Feign / RestTemplate	★★★★☆

DATABASES

PostgreSQL	★★★★☆
MySQL	★★★★☆
MongoDB	★★★★☆
Redis (Cache)	★★★★☆

AI & MODERN

Agentic AI	★★★★☆
LLM Integration	★★★★☆
Prompt Engineering	★★★★☆

SECURITY & AUTH

OKTA / JWT	★★★★☆
OAuth 2.0	★★★★☆
Crypto-JS	★★★★☆

TESTING & MONITORING

JUnit / Mockito	★★★★☆
Apache JMeter	★★★★☆
Postman / Swagger	★★★★☆
Splunk	★★★★☆
SLF4J	★★★★☆
Grafana	★★★★☆
Kibana / Prometheus	★★★★☆

METHODOLOGIES

Agile / Scrum	★★★★☆
Test Driven Development	★★★★☆
Behavioral Driven Development	★★★★☆
JIRA / Confluence	★★★★☆

EDUCATION

B.Tech, Computer Science

GMR Institute of Technology

2018 • CGPA 7.01

CERTIFICATIONS

- IBM — Big Data Hadoop with BigInsights
- IBM — Security Identity & Access Management

STRENGTHS

- Architecting microservices end-to-end — design through cloud deployment
- Translating ambiguous business needs into clean technical solutions
- Mentoring junior engineers and unblocking team delivery
- Quick learner — picked up Python, Leaflet & Agentic AI on-the-job

orchestrated by K3S, with Terraform IaC provisioning and Nginx reverse-proxy with TLS termination; observability via Grafana dashboards and SLF4J structured logs.

- Versioned in Bitbucket with Jenkins CI/CD pipelines, JUnit/Mockito test coverage, and JIRA-tracked Agile/Scrum delivery.

Horizontal Integration Pvt Ltd • Java Developer (React) Apr 2023 – May 2024

Client: CME Group

Delivered core modules of QDM (Quote Driven Manager) and LPM (Liquidity Provider Manager) on a high-throughput trading platform where API users buy and sell instrument floors based on their entitlements.

- Built microservices on Java 8 + Spring Boot with OKTA-based JWT authentication via Spring Security and role-based access control across the QDM/LPM modules.
- Integrated services through an NGINX API gateway, applying Hystrix circuit breakers to manage fault tolerance under load and prevent cascading failures across the trading mesh.
- Established inter-service communication using RestTemplate and Feign Client; integrated Apache Kafka topics for real-time quote and order event streaming.
- Developed React 16 UI modules using lifecycle hooks for the trading workflow, with Redux for predictable state across the entitlement and instrument views.
- Authored JUnit/Mockito unit tests, documented APIs in Swagger, validated contracts via Postman; managed Maven builds, Git workflows, and JIRA-tracked Agile/Scrum delivery.

Infor India Pvt Ltd • React & Java Developer Jul 2022 – Mar 2023

Client: Adidas

Built App-Xpress, a configurational React platform for supply-chain data transformation between customers and manufacturers using ATL/BTL MAP implementations across inbound and outbound flows.

- Implemented microservices on Java 8, Spring Boot, MySQL, and Hibernate/JPA, with Nexus as the central artifact repository and Spring Cloud Config for externalized configuration.
- Established Kafka-based pub/sub messaging for transformation events and configured environment-specific Spring profiles for staged testing across dev, QA, and pre-prod.
- Designed REST APIs (documented via Swagger) for the App-Xpress configurator, exposing inbound/outbound MAP definitions to a React + Material UI / Bootstrap front-end.
- Adopted aspect-oriented monitoring with Kibana and Prometheus to surface service health and latency metrics; containerized services with Docker and automated CI through Jenkins.
- Maintained JUnit/Mockito test coverage, Maven build chain, and Git branching; tracked stories in JIRA under Agile/Scrum delivery.

Xebia IT Architects Pvt Ltd • Java Full Stack Developer Feb 2022 – Jul 2022

Client: Axis Bank

Developed the Billers Onboarding (BOS) site for processing periodic bill payments, integrated with the bank's scrutinizer API for application approvals.

- Implemented a Java + Spring Boot + MongoDB application with REST APIs documented in Swagger and verified via Postman test collections.
- Hardened customer data using JWT authentication with OAuth 2.0 token flows for partner integrations, alongside Crypto-JS encryption to defend against intruder threats.
- Designed the biller-onboarding workflow with state machines for application status (submitted, in-review, approved, rejected) and retry logic for transient scrutinizer failures.
- Configured Kafka pub/sub for biller events, environment-specific Spring profiles, Jenkins CI pipelines, and AWS EC2 deployments behind an NGINX proxy with TLS termination.
- Built the React UI with ES6, Redux, HOCs, Pure Components, and Material UI components for predictable rendering and a polished user experience for bank operations staff.
- Integrated audit-trail logging with SLF4J and structured log shipping to Splunk, ensuring compliance with the bank's data-handling policies.

CAREER HIGHLIGHTS

- 7+ years across 6 organizations and 6 Fortune-500 clients
- Delivered 4 platforms at Standard Chartered Bank in 2 years
- Shipped database-agnostic Agentic AI tool with LLM-driven analytics
- Self-hosted production stack on K3S + LXD/LXC + Terraform
- Replaced manual MSTR workflow with automated geospatial pipeline

DOMAIN EXPERTISE

- Banking & Trading — SCB, CME Group, Axis Bank
- ESG & Sustainability — Geospatial risk analytics
- Supply Chain & Retail — Adidas
- Enterprise SaaS — SAP ESF
- Telecom — Rogers Communications

TOOLS & IDES

- IntelliJ IDEA, VS Code, Eclipse
- Postman, Insomnia, cURL
- DBeaver, pgAdmin, MongoDB Compass
- Docker Desktop, Lens (K8s), k9s
- Slack, MS Teams, Zoom

SOFT SKILLS

- Cross-functional collaboration
- Technical mentoring & code reviews
- Stakeholder communication
- Problem decomposition & ownership
- Calm under production incidents

LANGUAGES

English • *Professional*

Hindi • *Professional*

Telugu • *Native*

- Maintained JUnit/Mockito unit test coverage, Maven builds, and Git branching; coordinated Agile/Scrum delivery via JIRA with daily stand-ups across distributed teams.

Xoriant Solutions Pvt Ltd • Java Developer (React)

Sep 2021 – Jan 2022

Client: SAP

Built an interface for invoice upload and download in a centrally hosted ESF, extending ESF's ability to manage and monitor invoices for paid-business-services customers.

- Developed a Java + Spring Boot + PostgreSQL microservice with Hibernate/JPA persistence, serving invoice files to other microservices on request via REST endpoints.
- Designed file-handling logic supporting multiple invoice formats (PDF, XML, CSV) with content-type validation, virus scanning hooks, and tamper-evident checksums on upload.
- Secured endpoints with Spring Security and documented the contract in Swagger; validated end-to-end flows with Postman test suites and contract-driven integration tests.
- Containerized the service with Docker and deployed Maven builds to Google Kubernetes Engine (GKE) Dev environments via Jenkins CI on review approval.
- Optimized invoice retrieval performance with Redis caching of hot lookups and pagination on bulk download endpoints, cutting response times for high-volume customers.
- Built routing logic in React for the new invoice-generation module, integrated with the existing ESF shell, including breadcrumb navigation and deep-linkable filter states.
- Maintained JUnit/Mockito test coverage and Bitbucket version control; delivered features in two-week sprints under Agile/Scrum with peer code reviews.

Tata Consultancy Services Ltd • Java Full Stack Developer Jan 2019 – Aug 2021

Client: Rogers Communications

Implemented RAMP (Rogers Access Management Portal), where customers register and request approvals for customized roles to access communication pipelines and channels.

- Built a Spring Boot + PostgreSQL service with Hibernate/JPA persistence that tracks host systems and parses their logs to update live-status responses, exposed via REST APIs.
- Developed a React UI surfacing this response data and categorizing systems as healthy or impacted, supporting operations monitoring and incident triage.
- Designed a role-based approval workflow with multi-tier review (requester → manager → admin) and email notifications via SMTP integration.
- Maintained dependencies through an internal proxy server and centralized common configuration via Spring Cloud Config sourced from Rogers Bitbucket / Stash.
- Instrumented services with SLF4J structured logging and authored JUnit/Mockito unit tests to keep regression risk low across releases.
- Onboarded and mentored junior engineers — pair-programming on tickets, conducting code reviews, and writing internal Confluence documentation for new starters.
- Participated in production support rotations: triaged incidents, ran root-cause analysis, and authored post-mortems that fed back into the team's reliability backlog.
- Managed Maven builds, Jenkins CI pipelines, and JIRA-tracked stories under Agile/Scrum, collaborating across distributed onshore-offshore teams.
